

How to photograph your vehicle

We need 13 photos. With them we prepare the calculation without an on-site inspection.

Hold your phone horizontally
 All photos in landscape format.

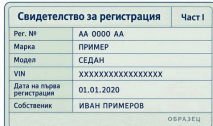

Photograph old damage too
 So we can separate it from the new damage.

Overview first, then detail
 First the whole vehicle, then every damage up close.

Daylight, sharp
 Not against the sun, no flash and no zoom.

1 Registration certificate – front

Whole document in the picture, legible. Personal data may be covered.

2 Registration certificate – back

Also flat and legible.

3 Front left, diagonal

Diagonally from the corner, whole vehicle in the picture.

4 Front right, diagonal

Diagonally from the corner, whole vehicle in the picture.

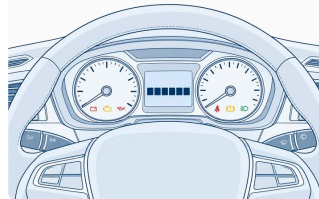

5 Rear left, diagonal

Diagonally from the corner, whole vehicle in the picture.

6 Rear right, diagonal

Diagonally from the corner, whole vehicle in the picture.

7 Mileage

With the ignition on, figures legible.

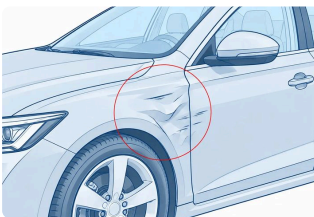

8 Vehicle identification number (VIN)

Bottom of the windscreen or door pillar.

9 Damage overview

From 2–3 metres, so it is clear where the damage is.

10 Damage details

Every damaged part up close, from about 1 metre.

11 Interior

Open the driver's door and photograph from outside: steering wheel, dashboard, seat. Deployed airbags in addition.

12 Technical inspection (ГТИ)

Certificate or sticker from the last inspection.

13 Previous damage (if any)

Damage not related to the current accident – please photograph it too.

Tyre photos are not needed. A photo is missing? You can submit it later via the link in the order confirmation e-mail.
